

Getting Through Ethical Obstacles in Nursing

It is expected of nurses to adhere to the nursing code of ethics. The fair distribution of limited medical resources is supported by these moral guidelines for healthcare professionals.

However, at some point in their careers, even nurses with excellent training may run into ethical issues. They can assist in defusing these circumstances by developing heightened ethical awareness.

1. Recognize the Patient's Position Every patient you encounter brings a unique set of circumstances to your attention. Each circumstance necessitates your attention and a well-thought-out strategy for resolving the issue, whether the patient is an adult with religious beliefs that hinder their treatment or a child with a mental disability that impairs [NURS FPX 6008 Assessment 2 Developing a Business Case](#) comprehension of the dangers of receiving blood transfusions.

Medication orders are one of the most common ethical issues that nurses face. The "Five Rights of Medication Use," which include the right patient, the right drug, the right dose, and the right route, are taught to nurses. However, there are times when you may be unsure of whether your doctor's order is appropriate or safe for the patient.

When this happens, you should always ask your coworkers for help. You can gain perspective and find the best solution to your problem by asking for advice from a trusted mentor, supervisor, or even the nursing instructor you learned from in school. Another useful resource that provides guidelines for making ethical decisions is the ANA Nursing Code of Ethics.

1. Recognize the Nurse's Position Every patient brings a unique set of circumstances to you. This makes what is going on a moral predicament. Jehovah's Witness patients, for instance, may be reluctant to receive blood because of their religious beliefs. You must respect their decision as an RN. To ensure safe patient care, the physician's orders must be followed.

Additionally, nurses frequently have to prioritize patients for treatment. When one patient requires immediate medical attention while another does not, this can lead to an ethical quandary. The nurse code of ethics says that nurses must always follow the patient's wishes unless they are considered life-threatening. You can seek advice from a nursing leader or other experienced nurses in your field if you are unsure of what to do. It is always preferable to seek assistance rather than ignoring an ethical issue.

1. **Communicate with Your Team** When nurses are confronted with ethical issues, it is essential to communicate with their team. They ought to discuss the circumstance with their supervisor and other nursing leaders in order to obtain insights that will assist them in resolving the problem. Conflicting values and principles are frequently at the heart of ethical issues in nursing. For instance, a patient's religious beliefs may lead them to reject certain treatments. This raises the question of whether the nurse should support the patient's decision or carry out the medically necessary actions to maintain the patient's health. Reviewing the ANA code of ethics and speaking with a dependable nurse mentor are the best ways to deal with situations like these. They might have been in a similar predicament before and are able to offer advice on how to deal with the current one.

1. **Find a Solution to the Dilemma** Each patient presents a unique set of circumstances, which frequently results in a nursing dilemma. While a patient's needs are always the most important thing, nurses must also think about their own morals, ethical principles, and societal values for each situation.

Ethical issues like a patient refusing treatment due to religious or personal beliefs or their end-of-life wishes frequently arise for nurses. In addition, there are inquiries regarding questionable medication orders or NURS FPX 6410 Exploration of Regulations and Implications.

It is essential for a nurse to maintain composure and communicate with all parties involved when confronted with a dilemma. A professional, such as your supervisor or even an experienced nurse mentor, who can provide insight into the circumstance based on their own experiences, is also helpful.

Last but not least, it is crucial to keep moving the problem up the command chain so that it receives the attention it requires.
